Total Note. Column percentages may not ad	48	(100)	57	(100)	61	(100)

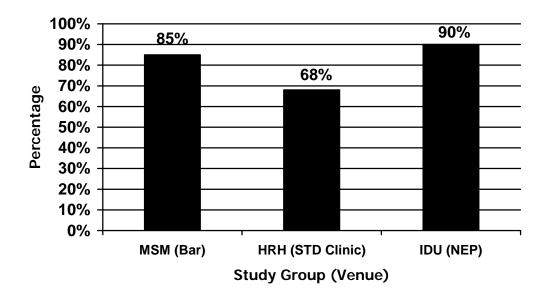

MSM, Men who have Sex with Men; HRH, High Risk Heterosexuals; IDU, Injection Drug Users NEP, Needle Exchange Program; dash indicates data not included

Please see Technical Notes for an explanation of definitions of risk groups and methodology of the HIV Testing Survey.

^a Persons who reported more than 1 racial group were categorized as multi-racial. However, persons who reported they were Hispanic were categorized as Hispanic, regardless of any other racial groups they reported.

¹ Income is recorded as monthly household income before taxes.

Figure 1. Percentage of Detroit participants reporting, "ever been tested for HIV," by recruitment venue (N=166), HIV Testing Survey, 2002¹

MSM=Men who have Sex with Men; HRH, High Risk Heterosexuals; STD, Sexually Transmitted Disease; IDU, Injection Drug Users; NEP, Needle Exchange Program.

Note. The data from this bar chart are also available in Table 2.

¹ This chart describes individuals who were deemed eligible to be included in the analysis; refer to Technical Notes.

Note. Column percentages may not add to 100 due to rounding. MSM=Men who have Sex with Men, HRH=High Risk Heterosexuals, NEP=Needle Exchange Program, IDU=Injection Drug Users

Needle exchange programs that offer HIV testing are categorized as "AIDS prevention or outreach program".

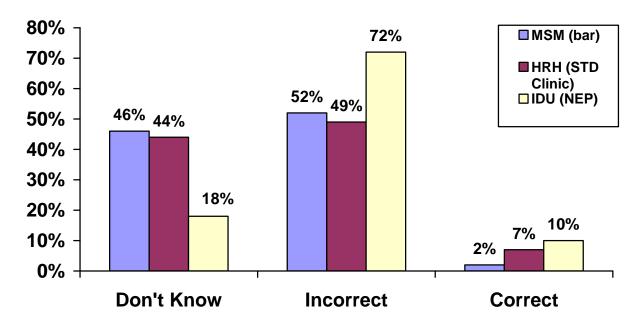

Table 7. Number and percentage of participants receiving an anonymous HIV test among those tested during the 12 months¹ prior to interview, by study site and recruitment venue, HIV Testing Survey, Detroit, 2002

	•					(IDU) :55)
Study site	No.	(%)	No.	(%)	No.	(%)
Detroit	12	(29)	13	(33)	21	(38)

Note. Column percentage may not add to 100 due to rounding. MSM=Men who have Sex with Men, HRH=High Risk Heterosexuals, NEP=Needle Exchange Program, IDU=Injection Drug Users

¹ Most recent HIV test.

Figure 2. Detroit Participants' knowledge of Michigan HIV case surveillance policy, by recruitment venue (n=166), HIV Testing Survey, 2002

Note. Participants were categorized as correctly identifying Michigan's HIV case surveillance policy if they answered yes to the question describing the appropriate HIV case surveillance policy and no or "don't know" to questions describing other policies. Those who answered, "don't know" to all questions were categorized as not knowing the policy, and other response patterns were considered incorrect.

Michigan has named reporting; therefore a name is reported to the health department if someone tests positive for HIV, unless the person was reported anonymously. Data for this graph are also presented in Table 8.

MSM=Men who have Sex with Men, HRH=High Risk Heterosexuals, NEP=Needle Exchange Program, IDU=Injection Drug Users

The data from this bar chart are also available in Table 8.

¹ Total MSM who had a primary partner.

² Total MSM who had receptive anal intercourse.

³ Defined as "a relationship with a man where you feel committed to him above anyone else and where you have had sex together."

⁴ Defined as "a man who was not a primary partner."

⁵ Total MSM who had a non-primary partner.

Figure 3. Percentage of those who reported having one or more primary¹ sex partners during the 12 months prior to interview among 48 MSM recruited in bars and 32 men and 25 women recruited in STD clinics², HIV Testing survey, Detroit 2002

Percentage of Detroit respondents who reported having one or more primary partners

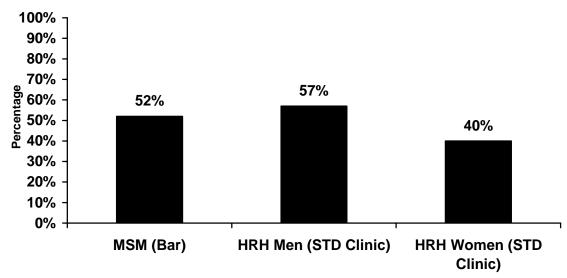

Note. MSM=Men who have Sex with Men, HRH=High Risk Heterosexuals, STD = Sexually Transmitted Disease

¹Defined as "a relationship with a (man/woman) where you feel committed to (him/her) above anyone else and where you have had sex together."

² For MSM recruited in bars, data represent the number of primary male sex partners; for men recruited in clinics, data represent number of primary female sex partners; for women recruited in clinics, data represent number of primary male sex partners.

The data in this bar chart are also available in Tables 11, 15, and 17.

Figure 4. Percentage of those who reported having one or more non-primary¹ sex partners during the 12 months prior to interview among 48 MSM recruited in bars and 32 men and 25 women recruited in STD clinics², HIV Testing survey, Detroit 2002

Percentage of respondents who reported having one or more non-primary partners

Note. MSM=Men who have Sex with Men, HRH=High Risk Heterosexuals,

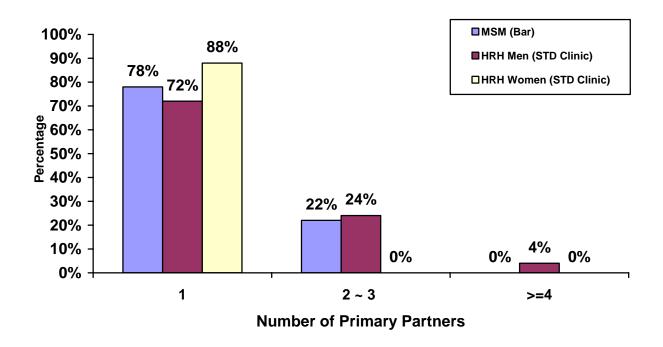

STD = Sexually Transmitted Disease

The data in this bar chart are also available in Tables 12, 16, and 18.

¹ Defined as someone "who was not a primary partner."

² For MSM recruited in bars, data represent the number of non-primary male sex partners; for men recruited in clinics, data represent number of non-primary female sex partners; for women recruited in clinics, data represent number of non-primary male sex partners.

Figure 5. Number of the primary¹ sex partners during the 12 months prior to interview among 48 MSM recruited in bars and 26 men and 22 women recruited in STD clinics², HIV Testing survey, Detroit 2002

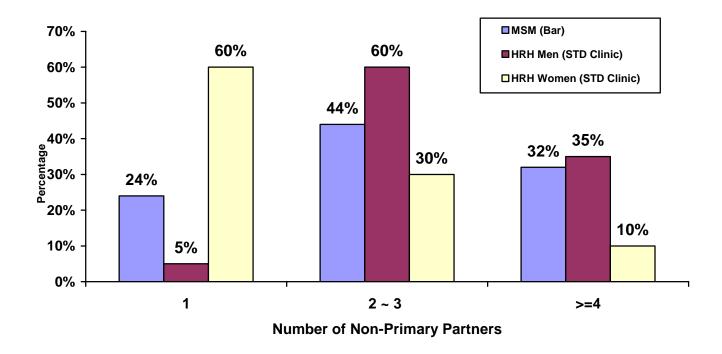

Note. MSM=Men who have Sex with Men, HRH=High Risk Heterosexuals, STD = Sexually Transmitted Disease

¹Defined as "a relationship with a (man/woman) where you feel committed to (him/her) above anyone else and where you have had sex together."

² For MSM recruited in bars, data represent the number of primary male sex partners; for men recruited in clinics, data represent number of primary female sex partners; for women recruited in clinics, data represent number of primary male sex partners.

The data in this bar chart are also available in Tables 11, 15, and 17.

Figure 6. Number of the non-primary¹ sex partners during the 12 months prior to interview among 37 MSM recruited in bars and 21 men and 10 women recruited in STD clinics², HIV Testing survey, Detroit 2002

Note. MSM=Men who have Sex with Men, HRH=High Risk Heterosexuals,

The data in this bar chart are also available in Tables 12, 16, and 18.

STD = Sexually Transmitted Disease

¹ Defined as someone "who was not a primary partner."

² For MSM recruited in bars, data represent the number of non-primary male sex partners; for men recruited in clinics, data represent number of non-primary female sex partners; for women recruited in clinics, data represent number of non-primary male sex partners.
